

Electrician Loyalty QR Platform

A loyalty app for electrical retailers to reward electricians for recommending and using their products, powered by secure product QR labels and a retailer admin panel.

Who it helps Electrical retailers who want more electricians to recommend their products.	How it works Every sold product gets a secure QR label that a registered electrician scans for points.	Pilot goal Prove the end-to-end flow in 6 weeks with 5 electricians and 1 category: Wires.
---	--	--

The Idea

The retailer sells many electrical products and wants electricians to actively recommend those products to customers. To encourage this behavior, the retailer will reward electricians with loyalty points whenever they scan QR labels attached to eligible products.

The system connects sales, product-level QR labels, electrician scans, points, returns, and redemption data into one controlled loyalty platform.

Typical Workflow

1 Retailer creates invoice in BUSY accounting software.	2 Staff selects the invoice in the admin panel.	3 System prints one QR label per product unit.	4 Electrician scans QR from the Android app.	5 Points are credited, tracked, and shown in history.
---	---	--	--	---

Important: The QR code is not printed inside the BUSY invoice. BUSY prints the invoice normally. QR labels are printed separately on a label printer and stuck on the physical products.

Electrician App

- Native Android app for the pilot.
- OTP login only for admin-registered mobile numbers.
- Bottom navigation: Home, Scan, History, Redeem.
- Bronze, Silver, and Gold tier display.
- PIN-style protection for redemption and total accumulated points.

Security Controls

- QR labels are unique per sold product unit.
- QR codes cannot be redeemed more than once.
- Each QR code has a configurable expiry.
- Invalid, duplicate, expired, or reversed scans are rejected.

Retailer Admin Panel

- Register electricians and manage access.
- Add SKUs/categories and assign points.
- Select BUSY invoices and print QR labels.
- View electrician data, scan history, and point totals.
- Reverse points when returned material is scanned.

Why It Matters

- Encourages electricians to recommend retailer products.
- Creates measurable loyalty and sales-influence data.
- Gives the retailer control over points, returns, and redemptions.
- Starts small, then scales to more categories and electricians.
